注意事項 1、この科目の問題用紙は11ページ、解答用紙はマークカード1枚である。

- 2. 解答用紙(マークカード)に、氏名・フリガナ・受験番号の記入および受験番号のマークを忘れないこと。
- 3. マークは HB の鉛筆で、はっきりとマークすること。
- 4. マークを消す場合、消しゴムで完全に消し、消しくずを残さないこと。
- 解答用紙(マークカード)は折り曲げたり、メモやチェックなどで汚したりしないよう に注意すること。
- 6. 各問題の選択肢のうち質問に適した答えを1つだけ、選びマークすること。1間に2つ 以上解答した場合は認りとする。
- 問題用紙は解答用紙(マークカード)とともに机上に置いて退出すること。持ち帰って はいけない。

I 次の英文を読み、下記の設問に答えなさい。

Think back over the last month - have you read any fiction?

Many young people probably haven't. They may have spent their free time online, posting Facebook or Twitter updates, or streaming episodes of The Big Bang Theory*1. Or they may have dedicated it (1) keeping up-to-date with the news, reading course materials, or professional journals. For these young people, reading stories and novels, after all, is old-fashioned, irrelevant, and a waste of time.

Or is it? Recent research has shown, (2), that reading fiction is good for your brain. Some benefits have been known for a while. Language teachers are well aware that reading extensively in the target language helps students acquire vocabulary, syntax, and, more generally, a feel for the way the language is used. Students can also learn about the culture, people, and places associated with their language of study. And all this is more likely to happen when you are reading fiction because a good novel draws you in: You want to know the people of the peop

School teachers also know all about the positive effects of reading, starting with parents reading stories aloud to their children. Numerous studies have found that children who are read to regularly become better readers themselves and generally perform better in school—not surprising, (3) the importance of reading for most school subjects. Children who become habitual readers get better grades and test scores throughout their academic careers.

But that's only the beginning of what reading can do for you. In recent years, thanks to fMRI scanning *2, scientists have learned a great deal about what happens in the brain during reading. The traditional view was that reading involved mainly the language centers of the brain, particularly Broca's and Wernicke's areas *2, which are responsible for interpreting written symbols and transforming them into meaning. Scientists now believe that much more of the brain is involved.

In a recent study in Spain, for example, researchers scanned participants' brains while they read words with strong associations of smell, such as "perfume" or "coffee." The scans showed activity in the primary olfactory cortex*1—the part of the brain that deals with smell. When participants read words with no smell associations, such as "chair" or "key," there was no activity there.

A similar study in France examined brain activity while participants read about body movements. Their brains were scanned while they read sentences such as "John grabbed the stick." and "Paul kicked the ball." Reading these sentences stimulated activity in the motor cortex *1, the part of the brain that coordinates body movements. Furthermore, within the motor cortex, the activity changed location according to whether the sentences mentioned a leg or an arm — as if the participants had actually moved their own leg or arm.

In fact, it seems that reading about something is a lot like the real experience, (4) the brain is concerned. And where are you most likely to find a wealth of suggestive details and colorful descriptions of people, places, situations, and actions? In fiction, of course. Reading a good novel stimulates all kinds of neurological activity in your brain.

But, as any avid reader is well aware, the experience of reading a novel is far more than gymnastics for the brain. In fiction, you can enter into the heads of characters and try to imagine what they are thinking and feeling. You can explore unknown emotional territory and experience novel social situations. According to Keith Oatley and his colleagues in neuropsychology at the University of Toronto, fiction provides us (5) a "simulation of reality" and gives the brain an opportunity to practice understanding and relating to other people. In fact, studies have found that people who read fiction are better able to guess the emotions of others than people who don't. As he has written, "We have discovered that fiction

at its best isn't just enjoyable, it measurably enhances our ability to empathize with other people."

(6) from a better understanding of an individual's motives and actions, fiction also gives the brain practice in understanding human relations, what happens when people get together. Oatley says: "Just as computer simulations of atmospheric pressure, winds, and humidity are used to generate weather forecasts, novels can be thought of as simulations of how people react to combinations of social forces." Research seems to confirm this: The more practice you get in navigating the complexities of fictional social worlds—whether with Anna Karenina** or Harry Potter*!—the better your social skills will be in real life.

Oatley's theory about fiction has sparked interest in various fields, more notably in business. In a blog post by Anne Kreamer for Harvard Business Review, "The Business Case for Reading Novels," she discusses the importance of emotional intelligence (the ability to understand people's emotions) in the business world. "Emotions have an impact on the bottom line," she discusses the important people with higher emotional intelligence receive the biggest pay raises and are promoted more. If emotional intelligence is so important, how can we improve it? Her answer is, by reading fiction. "It's when we read fiction that we have the time and opportunity to think deeply about the feelings of others, really imagining the shape and flavor of alternative worlds of experience.

Though business people might find the idea of learning from fiction surprising, Oatley's studies serve only to confirm what many others know from their experiences as teachers or readers. Oatley himself notes that there is nothing really new about his theory. "Two thousand years ago," Oatley writes: "Aristotle claimed that poetry—he meant the epics of Homer*2 and the tragedies of Aeschylus*3, Sophocles*10, and Euripides*11, which we would now call fiction—is a more serious business than history. History, he argued, tells us only what has happened, (7) ifiction tells us what can happen, which can stretch our moral imaginations and give us insights into ourselves and other people."

- 筒 4 下記の(17)~(20)の英間の答えとして最も適切なものを、それぞれ①~⑤の中から一つずつ 選びなさい。
 - (17) Which of the following ideas is mentioned in the passage?
 - ① Students who read professional journals get ahead in their careers.
 - ② Reading novels is a hobby which is deemed as part of self-satisfaction.
 - 3 Parents who read to their children are helping them do well in school.
 - 4 For students, reading novels helps improve only their language skills.
 - Students' performance in gymnastics has something to do with how long they read every day.
 - (18) What do Keith Oatley and his colleagues believe fiction can provide for us?
 - ① Models to better understand human behavior.
 - ② The representation of landscapes.
 - 3 Utopian images of the future.
 - The true history of the past.
 - 6 A world where one is isolated from others.
 - (19) Why does Keith Oatley mention Aristotle?
 - (I) Because Oatley regards Aristotle as the greatest Greek writer of fiction.
 - ② Because Aristotic was against fiction as Oatley is,
 - Because Aristotle made a similar argument in favor of fiction.
 - $\ensuremath{\mathfrak{G}}$ Because Aristotle believed that people should read history to understand the world.
 - Because Aristotle thought that learning history was more important than reading fiction.
 - (20) Which of the following represents an essential idea in the passage?
 - ① Reading fiction causes business people to be passed over for promotions.
 - ② Reading fiction enables us to be better prepared for having real social experiences.
 - $\ensuremath{\mathfrak{D}}$ Reading fiction is harmful for people in various ways.
 - Reading fiction is more useful to pupils and students than to business people.
 - B Reading fiction can give us time to forget the cares of everyday life.

you'll have your baby in hospital
 you take a paper cup
 you think you've missed one

問 2 次の(31)~(33)の英間の答えとして最も適切なものを、それぞれ①~⑤の中から一つずつ 演びなさい。 (31) Which of the following sentences appropriately describes the present condition of Mrs. Canterbury? ① Continued bad weather has done harm to her skin. ② She drinks too much alcohol. (3) She is going to have a baby for the first time. Her due date is supposed to be in December. ⑤ Her period has been irregular for several months. (32) Which of the following sentences appropriately describes the doctor? (1) The doctor guesses the patient is in the fourth month of pregnancy. 2 The doctor begins the consultation without any small talk. (3) The doctor thinks the patient had better give birth in hospital. The doctor gives the patient no chance to ask questions. Shout eight days later, the doctor is likely to show the patient a picture of her (33) What does the doctor recommend the patient do? Avoid pregnancy. (2) Rat more shellfish and soft cheese. (3) Keep drinking as much as she can. Go to postnatal classes. (5) Stop smoking entirely. Ⅲ 次の(34)~(38)の各英文中の下線部の単語の最も強く発音される音節の母音と同じ発音の母音を 含む単語を、それぞれ①~⑤の中から一つずつ選びなさい。 (34) Even the minutest amount of peanut can trigger a dangerous reaction known as anaphylactic shock. 3 head 4 uncle 6 youth (D) bite ② kid (35) Everyone has to learn the mechanics of his or her trade. ② damp 4 seize 6 threat (i) cable 3 pitch (36) The distinction must be made between ordinary refuse and toxic waste. 3 meant (37) I am learning how to make quilts with a sewing machine. ① board 2 chin 3 frown (4) Ioan (5) temb (38) Keep the thermometer under your arm for one minute. S soup (1) chief ② firm 3 hop
